

EMV

TAKING CHARGE

EMV has arrived. We've developed a browser-based, virtual terminal EMV solution. It's fully-integrated, ready to plug-and-play, and simple for merchants to adopt. PayTrace EMV is also a strong tool for resellers to build and retain their portfolio.

As an add-on module to our point of sale product family, EMV packs a powerful punch.

v1:04112017

FEATURES

Our EMV product is a browser-based virtual terminal solution, part of the PayTrace professional product.

Card present and signature solution increases security and reduces merchant liability of fraudulent transactions.

Our fully-integrated EMV solution offers total control of the user experience. Customer information is encrypted and stored in a PCI-compliant environment, making processing fast and secure. Semi-integrated EMV alternatives often use multiple vendors. This may lead to a more complex user processing and support experience.

Interchange savings – Visa and MasterCard generally charge a lower interchange rate for Level II and Level III transactions. We make it easy to add additional data that's required for these transactions.

Ideal for professional offices, retail environments, suppliers, distributors and all who accept in-person card payments.

USER EXPERIENCE

Improved user interface

Plug-and-play from your EMV card reader to the PayTrace virtual terminal

Sales partner demos

Merchant training and support

5-star service – you won't find better support for payment software elsewhere
